PROFESSIONAL SUMMARY

Results-driven **Data Analyst** with hands-on experience in **Python, SQL, Power BI, and Advanced Excel**. Skilled in **data cleaning, exploratory data analysis (EDA), dashboard development**. Proven ability to analyze complex datasets, automate reports, and deliver actionable insights to support data-driven business decisions.

TECHNICAL SKILLS

- **Programming & Querying:** Python, SQL
- **Data Analysis Libraries:** Pandas, NumPy
- **BI & Reporting Tools:** Power BI, Advanced Excel (VLOOKUP, INDEX-MATCH, XLOOKUP, SUMIFS, Pivot Tables)
- **Platforms & Databases:** Google Sheets, Google Colab, SQL Workbench, Jupyter Notebook

WORK EXPERIENCE

IDCC Global Chem Pvt. Ltd.

- *Import and Purchase Executive* Sep 2023 – Present
 - Managed end-to-end reporting by maintaining and updating large-scale import shipment data using Google Sheets, ensuring high data accuracy and consistency.
 - Performed data cleaning, validation, and reconciliation of import documentation to eliminate discrepancies and maintain audit-ready datasets.
 - Analyzed import statistics and cost components to calculate raw material cost estimates, supporting procurement and finance decision-making.
 - Prepared structured reports and summaries to track shipment status, cost trends, and operational performance.
- **Geekster**
 - *Data Analytics Bootcamp Intern*
 - Solved 400+ Python and SQL problems on HackerRank and LeetCode, strengthening data manipulation, querying, and analytical thinking skills.
 - Performed exploratory data analysis (EDA), data preprocessing, and visualization on real-world datasets to derive business insights.
 - Participated in Geekathons and analytics challenges simulating industry-level data problems and solution design.
 - Used Python, Pandas, NumPy, SQL, Power BI, Matplotlib, and Seaborn for complete data analysis workflows.

PROJECTS

- **Ford GoBike Trip Data — Exploratory Data Analysis ([Git Hub Link](#))**
 - Built Python/Pandas ETL pipeline merging 12 CSVs (1.86M+ rows), resolving dtype mismatches, 245K+ nulls, and outliers via threshold filtering.
 - Performed univariate/bivariate/multivariate EDA with Seaborn/Matplotlib, producing 20+ visualizations (heatmaps, pair plots, pivot tables).
 - Engineered time-based features (hour, day-of-week, month) from timestamps to analyze seasonality and commute patterns.
 - Applied groupby/pivot_table aggregations to segment usage by user_type, gender, and station across 1.74M cleaned records.
 - Ran correlation analysis (Pearson) on duration, age, and geospatial features to identify key behavioral drivers.
- **Shopper Spectrum ([Dashboard Link](#))**
 - Analyzed 500K+ e-commerce transactions using Python, Pandas, and NumPy to uncover customer purchasing patterns and sales trends
 - Engineered RFM (Recency, Frequency, Monetary) features and applied K-Means clustering to segment customers into 4 groups: High-Value, Regular, Occasional, At-Risk
 - Validated cluster quality using Elbow Method and Silhouette Score for optimal segmentation
 - Built a collaborative filtering recommendation engine using cosine similarity to suggest top-5 similar products
 - Deployed an interactive Streamlit web app for real-time customer segmentation and product recommendations.

- **Local Food Wastage Management System ([Dashboard Link](#))**
 - Architected relational SQLite database using 4 lifecycle datasets (providers, receivers, food listings, claims) to model and streamline end-to-end surplus food redistribution.
 - Developed interactive Streamlit dashboard in Python with advanced SQL analytical queries to monitor supply-demand trends, track donation volume, and visualize claim metrics.
 - Executed Exploratory Data Analysis (EDA) using Pandas to uncover critical fulfillment bottlenecks, revealing a 70% pending/cancellation rate across 1,000+ food listings.
 - Delivered strategic operational insights targeting rapid 15-day expiry windows, proposing decentralized hyper-local delivery models to maximize food rescue efficiency.
- **Black Friday Sales Analysis ([GitHub Link](#))**
 - Conducted exploratory data analysis on customer transaction data to understand purchasing behavior across demographics.
 - Identified peak sales periods, high-revenue product categories, and valuable customer segments using Python and Power BI.
 - Created visual dashboards and insights to support marketing and sales strategy recommendations.
- **Netflix Movie Analysis ([GitHub Link](#))**
 - Analyzed Netflix movies and TV shows to identify trends in genre popularity, release frequency, and country-wise production.
 - Performed data cleaning and feature analysis to study year-over-year growth in streaming content.
 - Built visualizations to highlight content distribution and strategic growth insights.
- **Amazon Product Sales Analysis ([GitHub Link](#))**
 - Conducted product and sales performance analysis using EDA techniques on e-commerce datasets.
 - Identified pricing trends, demand patterns, and inventory insights to support business optimization.
 - Presented analytical findings through charts and summaries to improve data-driven decisions.

EDUCATION

• Delhi University <i>Bachelor of Arts</i>	2022 62.30%
• Pusa Institute of Technology <i>Diploma in Automobile Engineering</i>	2020 82.33%

CERTIFICATIONS

-
- Google Data Analytics Certificate – [View Certificate](#)
 - Geekster Data Analytics Certificate – [View Certificate](#)
 - PwC Switzerland Power BI – [View Certificate](#)
 - Goldman Sachs Excel Skills for Business – [View Certificate](#)
 - HackerRank SQL (Basic & Intermediate) – Basic, Intermediate

ACHIEVEMENTS

-
- Achieved **5-Star Problem Solving Rating** on HackerRank.
 - Designed and delivered **interactive Power BI dashboards** for business reporting and insights.
